

Contents

Chapter I

GENERAL INTRODUCTION

Nitrogen Removal from Wastewater by Biofilm Method and Research of Condition in a Biofilm

1.1 Introduction	1
1.2 Backgrounds	2
1.2.1 Nitrogen removal	
1.2.2 Biofilm method	
1.2.3 Analysis inside biofilm	
1.2.4 Biofilm modeling	
1.2.5 Step change analysis	
1.2.6 Membrane science	
1.2.7 Membrane aeration biofilm reactor	
1.3 Objective of this study	7

Chapter II

DEVELOPMENT OF MICROELECTORDE

Measuring Distributions of Substrate Concentration inside Biofilm by Ion-selective Microelectrodes and an Oxygen Selective Microelectrode

2.1 Introduction	8
2.2 Biofilm from Organic Treatment System	8
2.2.1 Materials And Methods	
2.2.1.1 Reactor System	
2.2.1.2 Biofilms	
2.2.1.3 Dissolved Oxygen Microelectrode	
2.2.2 Results and Discussion	
2.2.2.1 Oxygen Penetration Depth	
2.2.2.2 Water Quality	
2.2.3 Conclusions	
2.3 Biofilm from Inorganic Treatment	15
2.3.1 Materials and Methods	

- 2.3.1.1 Reactor System
- 2.3.1.2 Biofilms
- 2.3.1.3 Liquid Ion-Selective Membrane (LIX) Microelectrodes
- 2.3.1.4 Fluorescence in situ Hybridization (FISH) Method
- 2.3.2 Results and Discussion
 - 2.3.2.1 Substrate Profile inside Biofilms
 - 2.3.2.2 Identification of Bacteria inside the Biofilm by Fish Method
 - 2.3.2.3 Water Quality
- 2.3.3 Conclusions

Chapter III

SIMULATION INSIDE BIOFILM

Simple Prediction of Oxygen Penetration Depth in Biofilms for Wastewater Treatment

3.1 Introduction	22
3.2 Materials and Methods	22
3.2.1 Simulation	
3.3 Results and Discussion	24
3.3.1 Density and porosity	
3.3.2 Oxygen penetration depth	
3.3.3 Determination of kinetic parameters and effective diffusion coefficient	
3.3.4 Simulation of oxygen distribution in biofilms	
3.3.5 Water quality	
3.4 Conclusions	27
3.5 Nomenclature	34

Chapter IV

STEP CHANGE ANALYSIS

Observation of substrate concentration profile inside biofilm in step change analysis

4.1 Introduction	35
4.2 Step-up Change of Substrate Concentration	35
4.2.1 Materials and Methods	
4.2.2 Results and Discussion	
4.2.3 Conclusions	

4.3 Step-down Change of Substrate Concentration	37
4.3.1 Materials and Methods	
4.3.2 Results and Discussion	
4.3.3 Conclusion	

Chapter V

NEW NITROGEN REMOVAL SYSTEM

Simultaneous Nitrification and Denitrification by Controlling Vertical and Horizontal Microenvironment in a Membrane-Aerated Biofilm Reactor

5.1 Introduction	41
5.2 Evaluation of Bacterial Attachment	41
5.2.1 Material and Methods	
5.2.1.1 Surface modification of membrane	
5.2.1.2 Wastewater treatment system	
5.2.1.3 Method of water quality analysis	
5.2.2 Results and Discussion	
5.2.2.1 Surface properties of membrane	
5.2.2.2 Adhesivity of nitrifying bacteria	
5.2.2.3 Ammonium-nitrogen removal efficiency	
5.2.2.4 Ammonium-nitrogen removal rate	
5.2.2.4.1 Bulk concentration change	
5.2.2.4.2 Concentration profile inside the biofilms	
5.2.3. Conclusions	
5.2.4. Nomenclature	
5.3 Oxygen Transfer Rate From The Membrane	47
5.3.1 Materials and Methods	
5.3.1.1 Membrane Properties	
5.3.2 Results and Discussion	
5.3.2.1 Oxygen Transfer Rate	
5.3.3 Conclusion	
5.4 Development of membrane aeration biofilm reactor	48
5.4.1 Material and Methods	
5.4.1.1 Bioreactor Configuration	
5.4.1.2 Analytical Method	
5.4.1.3 Microelectrode	
5.4.1.4 Fluorescence in situ Hybridization (FISH)	
5.4.2 Results and Discussion	
5.4.2.1 Water Quality	

- 5.4.2.2 Microprofile inside Biofilm
- 5.4.2.3 Evaluation of Nitrification Rate
- 5.4.3. Conclusion
- 5.4.4 Nomenclature

Chapter VI

CONCLUSION AND PERSPECTIVE

6.1 Conclusion	60
6.1.1 Determination and Simulation of Oxygen Distribution inside Biofilm	
6.1.2 Simultaneous Nitrification and Denitrification in Single Reactor	
6.2 Perspective	61
